

The History of ProArgi-9+

The power of the discovery of Nitric Oxide has been effectively applied in a nutritional therapeutic called ProArgi-9+. The virtues of clinical research, the evidence, and the proven benefits of this product have come together creating the miracle of health.

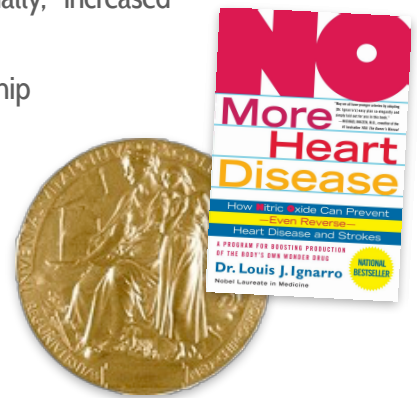

The Beginning... The Nobel Prize in Medicine

In 1998, Dr. Louis J. Ignarro was awarded the prestigious Nobel Prize in Medicine "for his discovery concerning nitric oxide as a signaling molecule in the cardiovascular system".

"Nitric Oxide has been called the 'miracle molecule', and the 'spark of life' because of its extraordinary importance in the health of virtually every cell in the body" says Dr. Ignarro. This is also why Nitric oxide was named "Molecule of the Year" in 1992 by the journal, Science. Additionally, "increased levels of Nitric Oxide in the human body has shown to be extremely valuable."

Scientific research over the past two decades show that there is a direct relationship between the amino acid, L-arginine, and Nitric Oxide. In fact, we now understand that L-arginine is the only known pre-cursor to Nitric Oxide in the human body.

Dr. Ignarro continues, "It is becoming more and more clear that Nitric Oxide is a molecule that may prevent and cure many diseases at once." ProArgi-9+ is an L-Arginine Complexer and has been shown to be a very powerful Nitric Oxide donor. This is its power.

The Father of L-Arginine

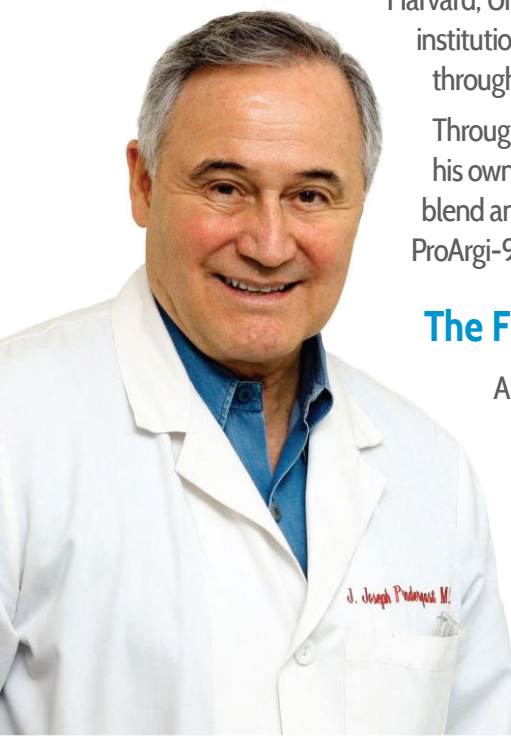

Before the Nobel Prize was awarded to Dr. Ignarro, Dr. Joseph Prendergast had been implementing L-Arginine in his medical practice for a decade—and personally using it himself. A pioneering physician of 35+ years, Board Certified in Internal Medicine as well as Endocrinology and Metabolism, contributor of more than 50 published medical articles in prestigious scientific journals such as the Journal of the American Medical Association, The New England Journal of Medicine, and Diabetes Care, the culmination of the The Nobel Prize being awarded for the power of L-Arginine irrefutably validated Dr. Prendergast's pioneering strategies and medical protocols.

Collaborating with the greatest scientific minds in Cardiovascular research from Stanford, Duke, Harvard, University of Michigan, and Leicester Medical Schools as well as many other research institutions around the world, Dr. Prendergast's passionate pursuit of helping his patients through the utilization of L-Arginine is exemplary.

Throughout his career, Dr. Prendergast tested and documented the results of over 6,000 of his own patients with stunning results and in 2003 refined and improved his proprietary blend and agreed with Synergy Worldwide to collaborate to produce what is now know as ProArgi-9+.

The First Human Clinical Trial

As news of Dr. Prendergast's successful patient results spread through the medical community, several physicians took note. Some, applauding the pioneering efforts of Dr. Prendergast, and some discrediting his new protocols. One respected organization came forward, the High Desert Heart Institute (HDHI), a premier heart disease service hospital that caters to a

high-risk heart disease patient base, and decided to put the rumors to the test.

The Congestive Heart Failure Unit within the HDHI conducted a comprehensive human clinical trial using ProArgi-9+. This study revealed profound data that supported the efficacy and the profound health benefits of ProArgi-9+.

The study was fully funded, administered, and directed by the High Desert Heart Institute. Dr. Siva Arunasalam, the Administrator of the hospital and a quadruple board certified interventional cardiologist, claimed at the conclusion of the study, "In twenty-two years, I have never seen anything like this. The results of this clinical study are remarkable and unexpected."

The Results of the Clinical Trial

18% Increase in HDL (Good) Cholesterol- Men
34% Increase in HDL Cholesterol- Women
40% Decrease in Triglycerides
8% Decrease in Glucose Levels
25% Decrease in C-Reactive Proteins
11% Reduction in Creatine Level
35% Increase in Magnesium Levels

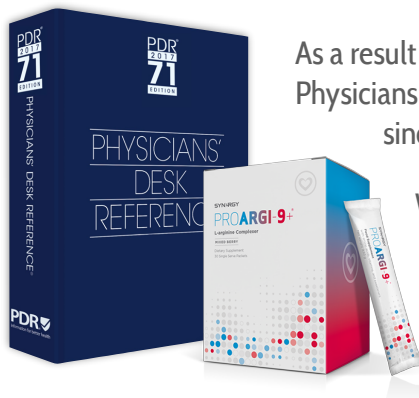

70% Decrease in Micro-albumin
303% Increase in Vitamin D Levels
13% Decrease in Systolic BP
17% Decrease in Diastolic BP
16% Increase in peripheral blood flow to the feet (ABI)
6% Decrease in Central Aortic Systolic Pressure
Significant increase in 6 Minute Walk Test

NOTE: These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

Synergy, a Worthy Partner

Synergy's decision to fully invest in science, to build the Hughes Center for Research and Innovation and to clinically prove the efficacy of their products was in large part due to this success with ProArgi-9+!

Synergy, and parent company, Nature's Sunshine, is known throughout the world for their superior pharmaceutical-grade manufacturing practices. Synergy's commitment to deliver the highest possible quality in their finished product is evidenced as ProArgi-9+ undergoes 262 different quality tests throughout the manufacturing process alone.

As a result of their commitment to excellence, ProArgi-9+ has been listed in the Physicians Desk Reference as the "highest quality l-arginine supplement in the world", since 2012.

We confidently join Synergy and their team of PhD's, MD's, microbiologists and biochemists and enthusiastically invite you to try ProArgi-9+. We think you will love it!
